To Whom It May Concern:

I am writing to highly recommend **Sara Díaz Serrano**, an outstanding student at Rey Juan Carlos University in Fuenlabrada, who has a profound interest in engineering. Her dedication and passion for this discipline make her an ideal candidate to continue her studies at Kyushu University in Japan. Sara has demonstrated a strong interest in expanding her educational horizons, particularly internationally.

Sara has excellent teamwork skills, having demonstrated a remarkable ability to collaborate effectively with her teammates. She has a special interest in design subjects involving group work and research. Some of the most notable projects she has worked on include the conceptual design of a microsatellite launcher vehicle for LEO orbit and a project involving the design of a satellite capable of orbiting one of Uranus' moons, while a set of CubeSats launched by the main vehicle would study another celestial body.

Sara's decision to study in Japan is driven not only by her academic interests but also by her desire to gain a global perspective and understand the advanced practices and technologies that Japan offers in the field of engineering. Her ability to adapt to new situations and her willingness to learn from different cultures demonstrate that she is ready to make the most of this opportunity.

I believe that Sara has the ideal profile to both benefit from and significantly contribute to your university community. Her great motivation to learn new things and her knowledge about this sector make her a great candidate to carry out this mobility. I strongly recommend Sara Díaz Serrano acknowledging she will be an excellent student at your institution.

Sincerely,

Francisco Javier Simó Reigadas
